AIR DEFENSE AREAS

PACIFIC OCEAN (WEST COAST) AIR DEFENSE AREAS: Effective Date June 1, 1950. In the interest of safety, all airmen proposing flight which will approach the West Coast of the United States from a distance greater than 20 nautical miles (23 statute miles) in the Pacific Ocean Area, between the Canadian - United States Border and the United States - Mexican Border are encouraged to file flight plans, preferably IFR, with the appropriate aeronautical facility. Similarly, airmen flying coastwise in the Pacific Ocean Area more than 20 nautical miles (23 statute miles) seaward from the shoreline are encouraged to cooperate in the same manner. Failure to file flight plans as outlined may result in in-flight identification by fighter aircraft.

This NOTAM does not apply to flight operations within the continental limits of the United States adjacent to the above described area, or aircraft operating less than 20 nautical miles (23 statute miles) seaward from the coastline.

NORTHEAST AIR DEFENSE AREA: Effective Date March 6, 1950. In the interest of safety, all airmen proposing flight which will approach the Boston, New York, or Washington domestic Air Route Traffic Control boundaries from the Atlantic Ocean area between Norfolk, Virginia, and Limestone, Maine, are encouraged to file flight plans, preferably IFR, with the appropriate facility. Similarly, aircraft flying locally or coastwise in the same area, more than 20 nautical miles (23 statute miles) seaward from the shoreline are encouraged to cooperate in the same manner as outlined above. Failure to file flight plans as outlined may result in in-flight identification by fighter aircraft.

Note: Aircraft operating within the continental limits of the United States or in the off-shore area less than 20 nautical miles (23 statute miles) from the coastline are not affected by the above.

EASTERN CANADIAN BORDER AIR DEFENSE AREA: Effective Date May 5, 1950. In the interest of safety, all airmen proposing flight which will cross the Canadian Border, southbound, east of the 87th meridian, (Lake Michigan) are encouraged to file flight plans, preferably IFR, with the appropriate aeronautical facility. Failure to file flight plans as outlined may result in in-flight identification by fighter aircraft.

This NOTAM does not relieve the individual pilot of his responsibility with respect to the customs and immigration requirements.

This NOTAM does not apply to flight operations within the continental United States adjacent to this area or northbound flights crossing the Canadian Border.

ALBUQUERQUE AIR DEFENSE AREA (LOS ALAMOS): Effective Date March 15, 1950. In the interest of safety, all airmen proposing to fly within 150 nautical miles (172 statute miles) of Los Alamos, New Mexico at an altitude greater than 10,000 feet MSL or more than 4,000 feet above the immediate terrain, whichever is higher, are encouraged to file flight plans, preferably IFR, with the appropriate CAA facility. Failure to do so may result in in-flight identification by fighter aircraft. THE EXISTING PROHIBITED AREA IN THE IMMEDIATE VICINITY OF LOS ALAMOS REMAINS OUT OF BOUNDS FOR ALL AIR TRAFFIC.

SEATTLE-HANFORD AIR DEFENSE AREA: Effective Date May 5, 1950. The United States Air Force has activated an Air Defense Area in the northwest section of the United States. This area is bounded by a line drawn from the coast at North Bend, Oregon to Ontario, Oregon, northeast from Ontario, Oregon to Superior, Montana and from Superior, Montana north to the Canadian Border, thence westward along the Canadian - United States Border to the Pacific Ocean, south along the Pacific Coast to the point of beginning (North Bend, Oregon).

In the interest of safety, all airmen proposing flight which will approach the above described defended area, at any altitude, from a distance greater than 20 nautical miles (23 statute miles) in the Pacific Ocean Area or across the Canadian - United States Border, southbound, at any altitude, are encouraged to file flight plans, preferably IFR, with the appropriate aeronautical facility.

Similarly, pilots flying coastwise adjacent to this area more than 20 nautical miles (23 statute miles) seaward from the shoreline are encouraged to cooperate in the same manner.

In addition, pilots of aircraft approaching this area from within the continental limits of the United States at an altitude greater than 10,000 feet MSL or more than 4,000 feet above the immediate terrain, whichever is higher, are encouraged to file flight plans as outlined above. Failure to file flight plans as outlined may result in in-flight identification by fighter aircraft.

This NOTAM does not relieve the individual pilot of his responsibility with respect to the customs and immigration requirements.

This NOTAM does not apply to aircraft operating within the continental limits of the United States, when flying at less than 10,000 feet MSL or 4,000 feet above the immediate terrain, or aircraft operating less than 20 nautical miles (23 statute miles) seaward from the coastline.

THE EXISTING PROHIBITED AREA IN THE IMMEDIATE VICINITY OF HANFORD, WASHINGTON REMAINS OUT OF BOUNDS FOR ALL AIR TRAFFIC.

CHECK THE DIRECTORY OF AIRPORTS

All abandoned airports; or those reported abandoned; or airportsclosed because of construction, lack of maintenance, or litigation; are cited as such in only the Directory of Airports. If there is an outstanding NOTAM on a field, a "+" in the remarks column of the Directory of Airports will so indicate. This NOTAM or additional data is cited in full in the Notices to Airmen section.

GCA AVAILABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO PILOTS AT CIVIL AND MILITARY AIRPORTS IN ACCORDANCE WITH THE FOLLOWING:

CAA GCA UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest GCA.

AIR FORCE GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective AFB.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call nearest air traffic control facility requesting GCA and further instructions.

Contact under VFR: VFR check-out training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, Air Force towers may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at pilot's discretion.

No AF unit can transmit directly on tower low frequency. In addition to frequencies listed below, Air Force GCA emergency VHF transmissions are made on 121.5 mc. Simplex service on 3117.5 kc is available at all installations as an alternate emergency frequency to work scheduled air carrier aircraft.

NAVY GCA UNITS- Available to civil pilots in emergency or by prior arrangement with C.O. of respective NAS or MCAS.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility or associated station control tower.

Contact under VFR: VFR check-out training flights by prior arrangement with the C.O. of respective station.

Most Navy GCA units can transmit instructions on tower low frequency. In addition to frequencies listed below, Navy GCA emergency transmissions are made on 121.5 mc. Simplex service on 3117.5 kc is available at all installations as an alternate emergency frequency to work scheduled air carrier aircraft.

NOTE: Air Force and Navy GCA units require twenty (20) to thirty (30) minutes for warming up outside of scheduled hours of operation. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible. Civil minimums established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

AIR NAVIGATION RADIO AIDS

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly. NOTE: Only those courses cited in Notam section have been flight-checked and found usable for 50 miles unless otherwise cited. Other radials not approved for instrument use.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC Category I (VOR) = Course alignment and signal level are monitored continuously NOTE. Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE. Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3)

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere, (Y) = Yellow hemisphere
→ = New or revised data
✓ = New facilities or name changes, see page XDX
\+ = Additional data will be found in Notices to Airmen Section

NOTE: Letters between range crs are quadrant identifiers. e g . "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i e , "Y" or "B", for yellow or blue, indicates visual: "A" or "N", aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses

RADIO CLASS DESIGNATIONS

AC. . . .Approach Control Tower, CAA
B. . . . .Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . .Control Tower, CAA
CA. . . .Control Tower, Air Force
CI . . . .Control Tower (City, County, Private, etc)
CN. . . .Control Tower, Navy
D. . . . .Distantly controlled
FM. . . .VHF fan marker (100 watts)
GCA. . .Ground Controlled approach system
H. . . . .Non-directional radio beacon (homing), power 50 watts or more
ILS. . . .Instrument Landing System (voice on localizer channel)
IM. . . . .VHF boundary marker
J. . . . . L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . .VHF fan marker, low powered (5 watts, not over 10 miles from range)
MH. . . .Non-directional radio beacon (homing) power less than 50 watts
ML. . . .Range (loop radiators), power less than 50 watts
MM. . . .VHF middle marker
LMM Compass locator station when combined with middle marker of ILS
MOR Low frequency omni-directional range
MRA Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL Range (loop radiators), power 50 or more, but less than 150 watts
OM VHF outer marker
LOM Compass locator when installed at outer marker site or within 5.5 miles of middle marker
P . Point-to-Point radio
RA. . .Range (adcock, vertical radiators), power 150 watts or more
RL. . .Range (loop radiators), power 150 watts or more
S. . . . .Simultaneous (range signals and voice) type of transmitter
T. . . . Teletype
TX. Principal teletype
V. . .Additional VHF voice feature on other than range frequency
VAR Visual-aural VHF range
VOR. Visual omni-directional VHF range
W . . Without voice facilities
Z VHF station location marker at a range station

FREQUENCY LEGEND

V = 140.58 and 111.1 mc transmitted.
# = Guards same VHF frequencies station transmits except 111 1 mc.
(1) = 3105,4495 kc guarded
(2) = 3105,4495,3117.5 kc, 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495,3117.5 kc; 122.1,126.7,140.58 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-3117.5,122.1 = guards every frequency in group (3) except 3117.5 and 122.1
(3),6210-3117.5 = guards 6210 plus every frequency in group (3) except 3117.5

NOTES

1. The new two-way international emergency frequency, 121.5 mc, has been commissioned at many towers and communication stations. All C.A.A. towers and communication stations will be using this frequency by approximately September 1, 1950
2. All CAA Control towers stand continuous watch on 3117.5 kc, airline frequency. CAA INSACS, however, will discontinue watch on 3117.5 kc sometime after April 1, 1950. INSAC with associated tower does not guard 3117.5 kc except when tower inoperative.
3. Range courses are magnetic in-bearings.
4. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
5. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
6. When a VHF is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the channel or frequency on which the station reply is expected.

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-U.S. Air Force	CG	-Coast Guard	MG	-Misc. Govt
A	-U.S. Army	I	-Intermediate	N	-Navy
C	-Commercial	M	-Municipal	NG	-Nat'l Guard
				P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

LONGEST RUNWAY

FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white; split-beam and other types)
Omission of B indicates rotating light is not available.

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Strip lights or portable runway lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Low intensity runway
- 5 - Low intensity instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis guarantees only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis indicates only part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:
F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

FUEL OCTANE (cont).

Air Force and Navy Fuel:
A+: 115/145 oct.
A : 100/130 oct.
B : 91/98 oct.
C : 73/80 oct.
J : JP - 1

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(d) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "+" indicates additional data in Notices to Airman Section.

(k) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(l) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(m) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Offer no public service for profit and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commander, Military Air Transport Service, Andrews Air Force Base, Flight Information, Director of Operations.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U.S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters MATS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", to A.F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications", and to A.F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U.S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D.C.; or Westover AFB, Mass.

ALASKA: McChord AFB, Wash.; Great Falls AFB, Mont.; or Fairfield-Suisun AFB, California.

BERMUDA: Mitchel AFB, N.Y.; Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D.C.; Fairfield-Suisun AFB, Calif., or Westover AFB, Mass.

CANADA: Great Falls AFB, Mont.; Brookley AFB, Ala.; McChord AFB, Wash.; Washington National Airport, D.C.; Selfridge AFB, Mich.; or Westover AFB, Mass.

CANAL ZONE and MEXICO: March AFB, Calif.

CANAL ZONE, CENTRAL AMERICA, MEXICO, and SOUTH AMERICA: MacDill AFB, Fla.; Kelly AFB, Tex.; Brookley AFB, Ala.; Washington National Airport, D.C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Tex.; MacDill AFB, Fla.; Washington National Airport, D.C.

ENGLAND, GREENLAND, ICELAND, and NORTH IRELAND: Washington National Airport, D.C.; or Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D.C.; Westover AFB, Mass.; or Kelly AFB, Texas.

HAWAII: Fairfield-Suisun AFB, Calif.

NOVA SCOTIA and NEWFOUNDLAND: Washington National Airport, D.C.; Westover AFB, Mass.; Selfridge AFB, Mich.; Brookley AFB, Ala.; or Mitchel AFB, New York.

LISTING OF LOCATION OF PLAN 62 INTERPHONE FACILITIES: The location of each Plan 62 interphone connection to Flight Service is indicated in the Directory of Airports section of A.N 08-15-1. When closing or filing flight plans with Flight Service, pilots should check availability of interphone before placing long distance phone calls.

*Headquarters, USAF has directed following utilization only for communications as listed with a view to eliminating congestion: Channel A: IFR flight and such other traffic as required by CAA; Channel B: Immediate aircraft movements within control zone of airport; Channel C: Routine IFR and VFR flights and "company business".

**This frequency plan is effective upon completion of modification AN/ARC-1 guard channel in accordance with BuAer Technical Order to permit tuning to 121.5 mc. Prior to completion of this modification, 140.58 mc for CAA Airways will be carried in guard channel of AN/ARC-1 equipment, and 121.5 mc in Channel 1.

***In 4 channel equipment (ARC-5 and SCR-522) 126.18 mc or 142.02 mc may be substituted on Channels C and D in accordance with operational requirements.

U.S. AIR FORCE CONTROL TOWERS AND RADIO RANGES DISCONTINUE GUARD ON 3105 KC: Effective March 1, 1950, USAF control towers and radio ranges discontinued guarding 3105 kc. Only activities which maintain guard on this frequency are those requiring same due to presence of civil aircraft on the field, in the traffic pattern, or upon receipt of civil inbound flight plan.

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 through 103, A.N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aids and communication services, particularly when standard low frequency facilities are not available.

ADVISORY REGARDING GCA MINIMUMS DURING APPROACH: USAF Regulations require all USAF GCA final controllers to advise aircraft when they are passing through the published GCA minimum established for a specific base. This advisory is intended for the sole purpose of re-emphasizing the pilot's responsibility with regard to field minimums.

APPROVAL OF INSTRUMENT APPROACH PROCEDURES FOR AIRPORTS LOCATED IN EXCESS OF SEVEN MILES FROM THE RANGE STATION: In accordance with minutes of Airspace Subcommittee Meeting No. 131, instrument approach procedures may now be approved for airports located in excess of seven miles from the associated radio facility, but such procedures will be governed by the following criteria:

a. From 7 to 10 miles, visibility not less than 2 miles and ceiling not less than 500'.

b. From 10 to 12 miles, visibility not less than 2 miles and ceiling not less than 700'

c. Twelve miles or over, operations shall be conducted in accordance with visual flight rules from radio range facility. Air Force procedures utilizing contact courses have recently been disapproved. If cancellation affects operation, new procedure should be submitted in accordance with AF Letter 55-6 and above criteria.

ATTENTION ALL CLEARANCE AUTHORITIES - CLEARANCE OF JET AIRCRAFT: Headquarters, U. S. Air Force has directed dissemination of the following policy regarding clearance of jet aircraft:

"THE INSTRUMENT LETDOWN PROCEDURES CONTAINED IN USAF PILOT HANDBOOK - SPECIAL JET - UNITED STATES, ARE APPLICABLE IN THE SAME SENSE AS THOSE OUTLINED IN PARAGRAPH 37, AIR FORCE REGULATION 60-16, JULY 11, 1949".

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following are those which are now effective and distributed under AF Regulation 5-12. Base operations officers, weather and communication units, should check copies in use to insure that latest issues and all revisions are available. No manuals other than the following should be requested at this time under paragraph 5, AF Regulation 5-12.

GROUP I MATERIAL: II-B-2, Movement and Control Messages, July 1, 1948; II-B-3, Notices to Airmen, First Edition May 1, 1949 with one revision; Contractions, Fourth Edition, Dec.1, 1949; Location Identifiers, Third Edition, Sept. 15, 1948, with 17 supplements.

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 of March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Coprs aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

MANDATORY GUARD ON 3105 KC DISCONTINUED: Mandatory guard on 3105 kc at Naval and Marine Air-ground communications installations are being discontinued.

CIVIL SPECIAL NOTICES

CAA AIRWAY COMMUNICATIONS STATIONS GUARDING 126.7 MC: Receiving watch on 3117.5 kc, airline frequency, will be discontinued by all CAA arwy communications stns on July 1, 1950. All CAA airway communications stations stand a continuous receiving watch on 126.7 mc, airline enroute frequency.

FLIGHTS INTO CANADA: No photographic equipment may be installed in, nor may any photographs be taken from any U. S. aircraft operating in, or over, Canadian territory.

COMPASS LOCATOR SYMBOLS: To conform with ICAO standards the letter "L" is now in use as the abbreviation denoting a compass locator. This replaces the "CL" or "K" as used in the past on charts or in the Airman's Guide. "OMK" now becomes "LOM"; "MMK" now becomes "LMM"; "IMK" becomes "LIM".

The abbreviation "L" as used in the Airman's Guide indicated L/MF voice facility on other than range frequency. This now becomes "J".

See Radio Class Designations, Page VI.

DANGER AREA DESIGNATIONS: The following Danger Area amendments is effective upon publication in the Federal Register:

AMENDMENT NO. 43

(1) The Camp Cooke, Calif., temporary area, published on June 10, 1950, in 15 F.R. 3666, is amended by changing the "Description by Geographical Coordinates" column to read: "Beginning at lat. 35°07'00"N, long. 120°36'00"W; due S to a point 3 nautical miles from the shoreline at lat. 34°30'30"N; northerly paralleling the shoreline at a distance of 3 nautical miles to lat. 35°07'00"N, long. 120°42'10"W; due E to lat. 35°07'00"N, long. 120°36'00"W, point of beginning".

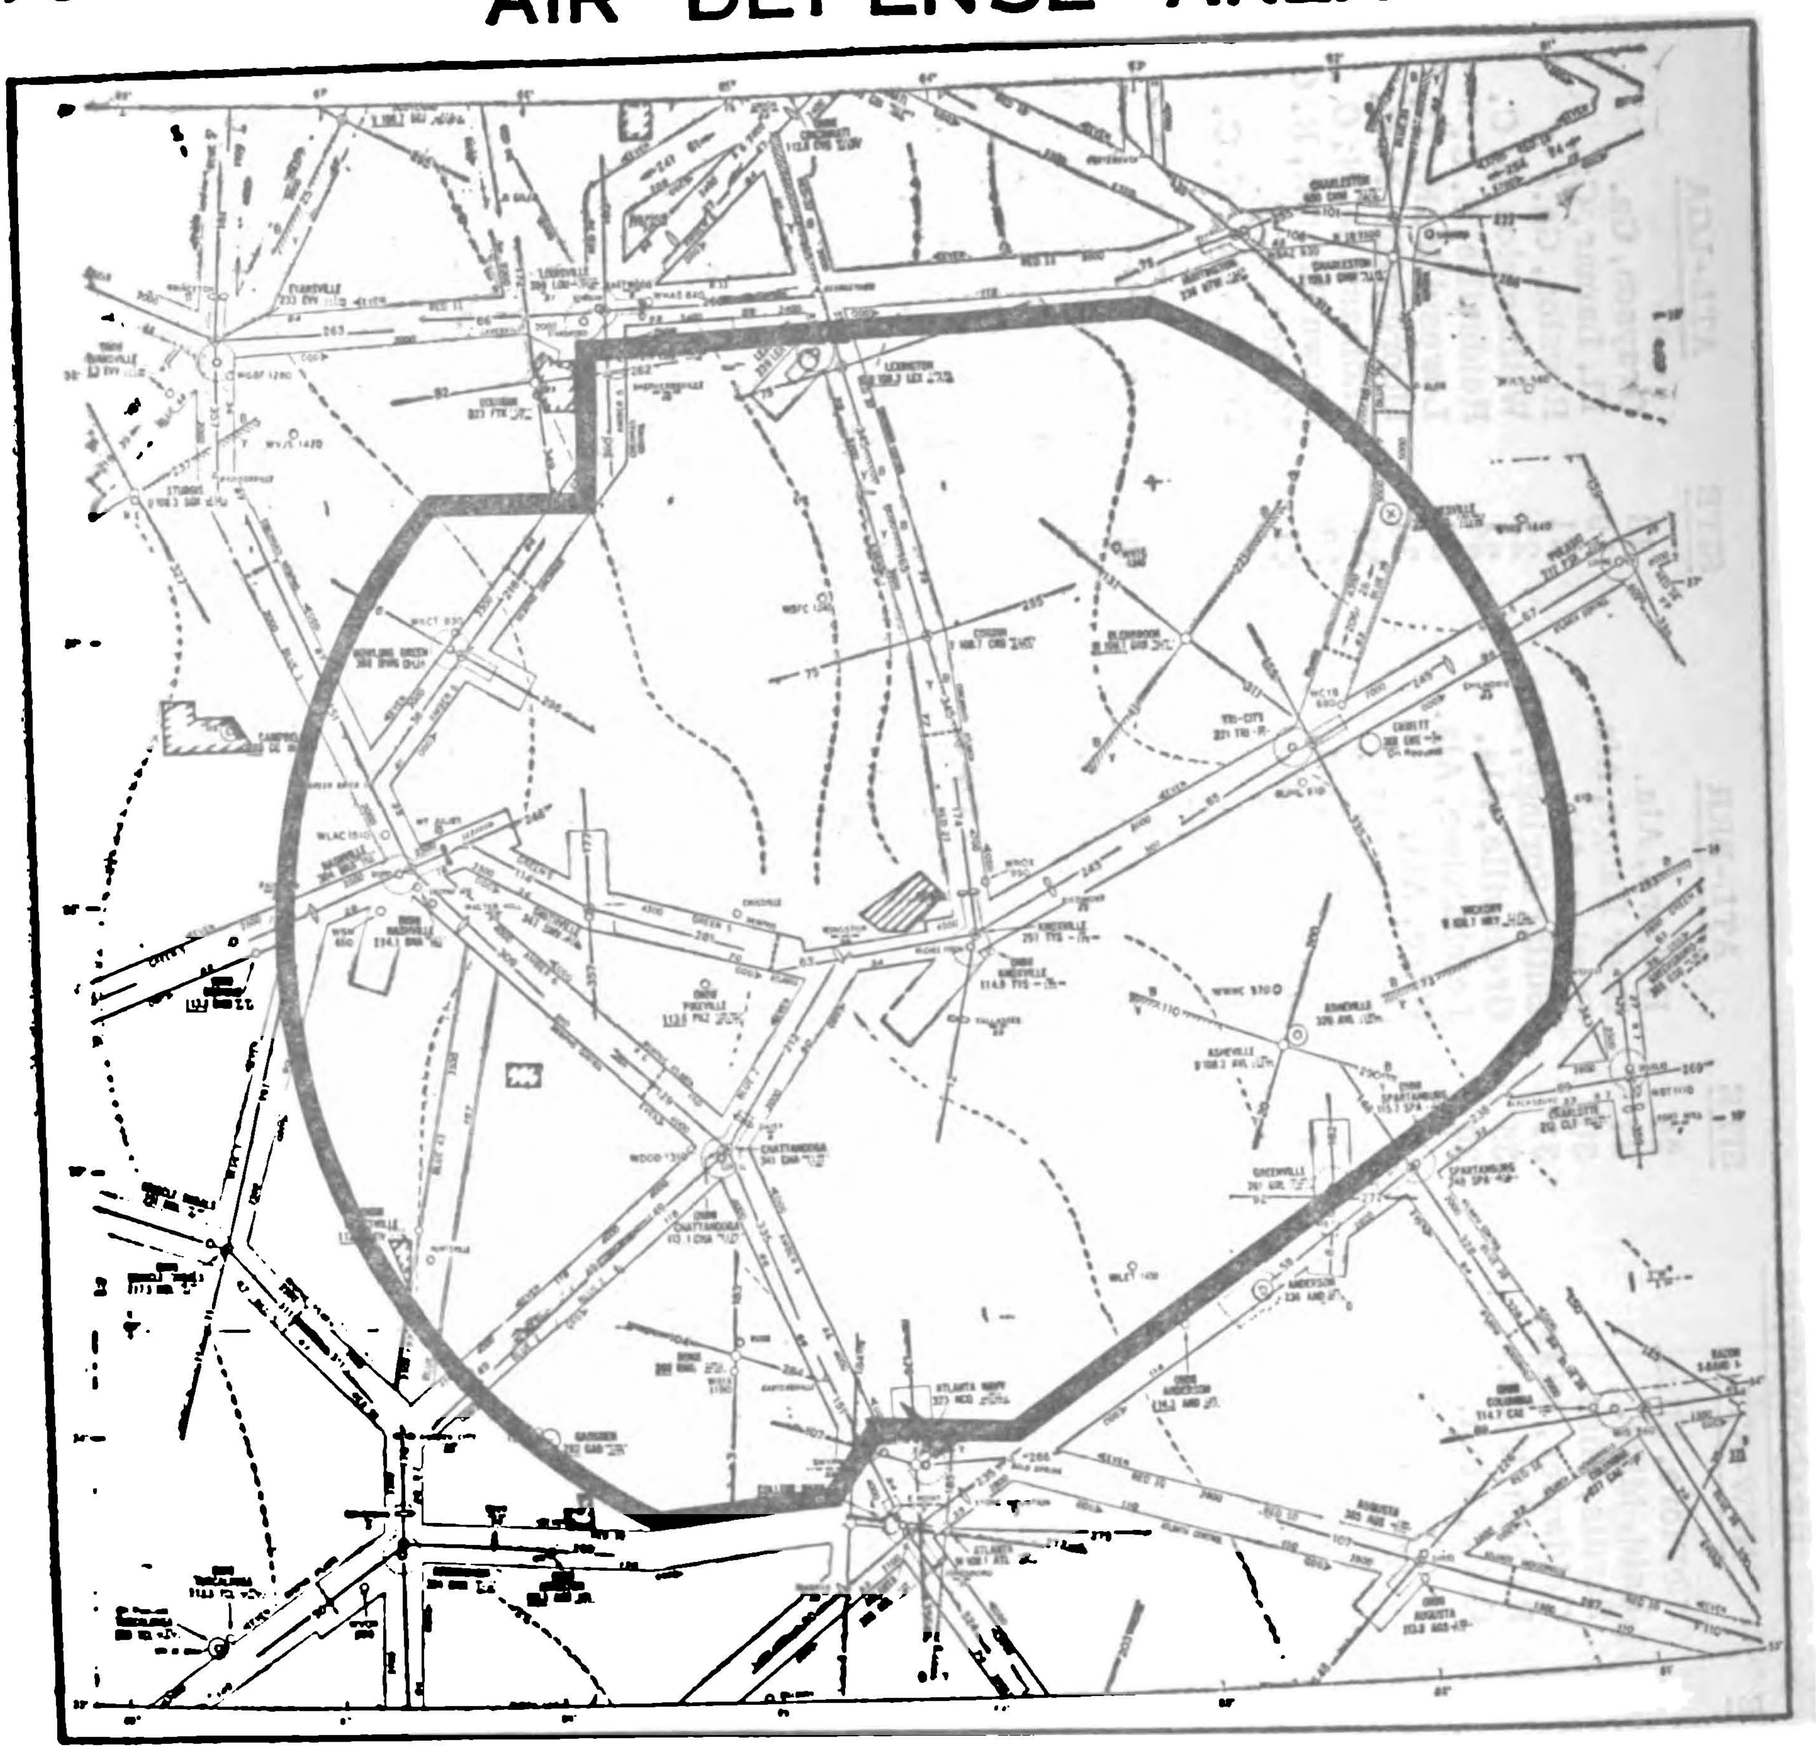
OAK RIDGE AIR DEFENSE AREA



OAK RIDGE AIR DEFENSE AREA

Effective June 27, 1950.

In the interest of safety, all airmen proposing to fly within 150 nautical miles (172 statute miles) of Oak Ridge, Tennessee, (excluding the area lying within and north of Civil Airway Red 11, the area within 10 miles of Godman, Kentucky range station, the area lying within and southeast of Civil Airway Green 6 and the area within 30 miles of Atlanta, Georgia range station) at an altitude greater than 6,000 feet MSL or more than 4,000 feet above the immediate terrain, whichever is higher, are encouraged to file flight plans, preferably IFR, with the appropriate CAA facility.

Failure to do so may result in in-flight identification by fighter aircraft.

This NOTAM does not apply to flights operating within the area at less than 6,000 feet MSL or less than 4,000 feet above the immediate terrain.

THE EXISTING PROHIBITED AREA IN THE IMMEDIATE VICINITY OF OAK RIDGE REMAINS OUT OF BOUNDS FOR ALL AIR TRAFFIC.

CHECK THE DIRECTORY OF AIRPORTS

All abandoned airports; or those reported abandoned; or airportsclosed because of construction, lack of maintenance, or litigation; are cited as such in only the Directory of Airports. If there is an outstanding NOTAM on a field, a "+" in the remarks column of the Directory of Airports will so indicate. This NOTAM or additional data is cited in full in the Notices to Airmen section.

GCA AVAILABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO PILOTS AT CIVIL AND MILITARY AIRPORTS IN ACCORDANCE WITH THE FOLLOWING:

CAA GCA UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest GCA.

AIR FORCE GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective AFB.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call nearest air traffic control facility requesting GCA and further instructions.

Contact under VFR: VFR check-out training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, Air Force towers may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at pilot's discretion.

No AF unit can transmit directly on tower low frequency. In addition to frequencies listed below, Air Force GCA emergency VHF transmissions are made on 121.5 mc. Simplex service on 3117.5 kc is available at all installations as an alternate emergency frequency to work scheduled air carrier aircraft.

NAVY GCA UNITS- Available to civil pilots in emergency or by prior arrangement with C.O. of respective NAS or MCAS.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility or associated station control tower.

Contact under VFR: VFR check-out training flights by prior arrangement with the C.O. of respective station.

Most Navy GCA units can transmit instructions on tower low frequency. In addition to frequencies listed below, Navy GCA emergency transmissions are made on 121.5 mc. Simplex service on 3117.5 kc is available at all installations as an alternate emergency frequency to work scheduled air carrier aircraft.

NOTE: Air Force and Navy GCA units require twenty (20) to thirty (30) minutes for warming up outside of scheduled hours of operation. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible. Civil minimums established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

(A)=Air Force facility. GP=Glide Path. L7=Hi-intensity approach lgts. (W)=Without voice. (&)=On test basis, unmonitored and not to be used for navigation. LMM's, LOM's are at the same locations as the middle and outer markers unless otherwise specified. →New or revised data. + =additional data will be found in Notices to Airmen section. •Continuous dots.
(BC-8)=Lclzr back course non-standard and usable only to 8 mi. (BC-unusable)=Back course unusable.

AIR NAVIGATION RADIO AIDS

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly. NOTE: Only those courses cited in Notam section have been flight-checked and found usable for 50 miles unless otherwise cited. Other radials not approved for instrument use.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
➔ = New or revised data
◤ = New facilities or name changes, see page XIX
\+ = Additional data will be found in Notices to Airmen Section

NOTE: Letters between range crs are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N", arual. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . .Approach Control Tower, CAA
B. . . . .Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . .Control Tower, CAA
CA. . . .Control Tower, Air Force
CI . . . .Control Tower (City, County, Private, etc.)
CN. . . .Control Tower, Navy
D. . . . .Distantly controlled
FM. . . .VHF fan marker (100 watts)
GCA. . .Ground Controlled approach system
H. . . . .Non-directional radio beacon (homing), power 50 watts or more
ILS. . . .Instrument Landing System (voice on localizer channel)
IM. . . .VHF boundary marker
J. . . . .L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . .VHF fan marker, low powered (5 watts, not over 10 miles from range)
MH. . . .Non-directional radio beacon (homing) power less than 50 watts
ML. . . .Range (loop radiators), power less than 50 watts
MM. . . VHF middle marker
LMM. . Compass locator station when combined with middle marker of ILS
MOR. . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . .VHF outer marker
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
P. . . . .Point-to-Point radio
RA. . . .Range (adcock, vertical radiators), power 150 watts or more
RL. . . .Range (loop radiators), power 150 watts or more
S. . . . .Simultaneous (range signals and voice) type of transmitter
T. . . . .Teletype
TX. . . .Principal teletype
V. . . . .Additional VHF voice feature on other than range frequency
VAR. . .Visual-aural VHF range
VOR. . .Visual omni-directional VHF range
W. . . . .Without voice facilities
Z. . . . .VHF station location marker at a range station

FREQUENCY LEGEND

V = 140.58 and 111.1 mc transmitted.
\# = Guards same VHF frequencies station transmits except 111.1 mc
(1) = 3105,4495 kc guarded
(2) = 3105,4495,3117.5 kc, 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495 kc; 122.1,126.7,140.58 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-140.58,122.1 = guards every frequency in group (3) except 140.58 and 122.1
(3),6210-140.58 = guards 6210 plus every frequency in group (3) except 140.58

NOTES

1. The new two-way international emergency frequency, 121.5 mc, has been commissioned at many towers and communication stations. All C.A.A. towers and communication stations will be using this frequency by approximately September 1, 1950.
2. All CAA Control towers stand continuous watch on 3117.5 kc, airline frequency. CAA INSACS, however, will discontinue watch on 3117.5 kc sometime after April 1, 1950. INSAC with associated tower does not guard 3117.5 kc except when tower inoperative.
3. Range courses are magnetic in-bearings.
4. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
5. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
6. When a VHF is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the channel or frequency on which the station reply is expected.

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U. S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-U.S. Air Force	CG	-Coast Guard	MG	-Misc. Govt
A	-U. S. Army	I	-Intermediate	N	-Navy
C	-Commercial	M	-Municipal	NG	-Nat'l Guard
				P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport.

If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

LONGEST RUNWAY

FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is not available.

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting

- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Strip lights or portable runway lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Low intensity runway
- 5 - Low intensity instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis guarantees only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis indicates only part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:
F1: 80 oct., at least
F2: 87 oct., and lower
F3: 91 oct., and lower
F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

FUEL OCTANE (cont)

Air Force and Navy Fuel:
A+: 115/145 oct.
A : 100/130 oct.
B : 91/98 oct.
C : 73/80 oct.
J : JP - 1

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U. S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(d) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "+" indicates additional data in Notices to Airman Section.

(k) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(l) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(m) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Offer no public service for profit and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

NOTICES TO AIRMEN

SPECIAL NOTICES

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commander, Military Air Transport Service, Andrews Air Force Base, Flight Information, Director of Operations.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U.S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters MATS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", to A.F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications ", and to A.F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields".

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.

AIR FORCE FOREIGN CLEARING STATIONS: Under the authority of Air Force Regulation 60-8 of July 6, 1949, U.S. Air Force aircraft with destinations listed below or returning therefrom to the United States will clear through the stations indicated:

AFRICA and AZORES: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D.C.; or Westover AFB, Mass.

ALASKA: McChord AFB, Wash.; Great Falls AFB, Mont.; or Fairfield-Suisun AFB, California.

BERMUDA: Mitchel AFB, N.Y.; Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D.C.; Fairfield-Suisun AFB, Calif. , or Westover AFB, Mass.

CANADA: Great Falls AFB, Mont.; Brookley AFB, Ala.; McChord AFB, Wash.; Washington National Airport, D.C.; Selfridge AFB, Mich.; or Westover AFB, Mass.

CANAL ZONE and MEXICO: March AFB, Calif.

CANAL ZONE, CENTRAL AMERICA, MEXICO, and SOUTH AMERICA: MacDill AFB, Fla.; Kelly AFB, Tex.; Brookley AFB, Ala.; Washington National Airport, D.C.

CARIBBEAN: Brookley AFB, Ala.; Kelly AFB, Tex.; MacDill AFB, Fla.; Washington National Airport, D.C.

ENGLAND, GREENLAND, ICELAND, and NORTH IRELAND: Washington National Airport, D.C.; or Westover AFB, Mass.

EUROPEAN THEATER: Brookley AFB, Ala.; MacDill AFB, Fla.; Washington National Airport, D.C.; Westover AFB, Mass.; or Kelly AFB, Texas.

HAWAII: Fairfield-Suisun AFB, Calif.

NOVA SCOTIA and NEWFOUNDLAND: Washington National Airport, D.C.; Westover AFB, Mass.; Selfridge AFB, Mich.; Brookley AFB, Ala.; or Mitchel AFB, New York.

UTILIZATION OF CAA VAR STATIONS BY MILITARY AIRCRAFT: The attention of pilots is directed to the fact that voice facilities are available at many VAR stations (see pages 90 through 103, A.N. 08-15-1), and CAA communications stations are located thereat. Such VAR facilities should be utilized for navigational aids and communication services, particularly when standard low frequency facilities are not available.

*Headquarters, USAF has directed following utilization only for communications as listed with a view to eliminating congestion: Channel A: IFR flight and such other traffic as required by CAA; Channel B: Immediate aircraft movements within control zone of airport; Channel C: Routine IFR and VFR flights and "company business".

**This frequency plan is effective upon completion of modification AN/ARC-1 guard channel in accordance with BuAer Technical Order to permit tuning to 121.5 mc. Prior to completion of this modification, 140.58 mc for CAA Airways will be carried in guard channel of AN/ARC-1 equipment, and 121.5 mc in Channel 1.

***In 4 channel equipment (ARC-5 and SCR-522) 126.18 mc or 142.02 mc may be substituted on Channels C and D in accordance with operational requirements.

ATTENTION ALL CLEARANCE AUTHORITIES - CLEARANCE OF JET AIRCRAFT: Headquarters, U. S. Air Force has directed dissemination of the following policy regarding clearance of jet aircraft:

"THE INSTRUMENT LETDOWN PROCEDURES CONTAINED IN USAF PILOT HANDBOOK - SPECIAL JET - UNITED STATES, ARE APPLICABLE IN THE SAME SENSE AS THOSE OUTLINED IN PARAGRAPH 37, AIR FORCE REGULATION 60-16, JULY 11, 1949"

COMPULSORY REPORTING POINTS - VAR RANGE FACILITIES: VAR facilities designated by CAA and shown on radio facility charts as Compulsory Reporting Points will be applicable to USAF aircraft only if the aircraft is equipped with the necessary instruments and radio frequencies and if a flight plan has been filed with ATC declaring the intention to utilize these facilities. When ATC clearances include instructions using these facilities and the aircraft is not equipped for such use, the pilot should so advise the traffic control agency and request amended traffic control instructions.

CURRENT FEDERAL AIRWAYS MANUALS OF OPERATION: The following are those which are now effective and distributed under AF Regulation 5-12. Base operations officers, weather and communication units, should check copies in use to insure that latest issues and all revisions are available. No manuals other than the following should be requested at this time under paragraph 5, AF Regulation 5-12.

GROUP I MATERIAL: II-B-2, Movement and Control Messages, July 1, 1948, II-B-3, Notices to Airmen, First Edition May 1, 1949 with one revision; Contractions, Fourth Edition, Dec. 1, 1949, Location Identifiers, Third Edition, Sept. 15, 1948, with 17 supplements.

GROUP II MATERIAL: II-B-5, Airways Air-Ground Communications, Second Edition, Sept 1 1948, with two revisions.

GROUP IV MATERIAL: Civil Airways Mileage Chart of July 27, 1949.

GROUP V MATERIAL: Service "A" Manual, Feb. 21, 1950 with four revisions, Service "C" Manual Jan. 24, 1950; Teletype Maps: M-10, Jan 1, 1949; M-11, Dec. 1, 1949, M-13, June 15, 1948; and M-14, July 1, 1948.

GROUP VI MATERIAL: Teletype Maps: Drawing M-58, April 1, 1949, Drawing M-59, Jan. 5, 1949.

✓ CHANGES FOR TO 08-15-01: (1) Television interference with aircraft marker beacon Receivers. Investigation has revealed serious interference from Channel 5 television stations and to some extent from Channel 4 stns, on mrkr beacon revrs where the television stas are letd adjacent to radio rng crss or ILS letdr crss. This interference is experienced with most receivers but may be recognized by monitoring the aural output to verify the mrkr beacon ident signals. All pilots flying in the vicinity of the following letns should be alert to the possibility of interference: Dayton, Cincinnati, Birmingham, Phoenix, Oakland, San Francisco, Washington, Jacksonville, Miami, Atlanta, Chicago, Louisville, Boston, St Louis, Newark, Albuquerque, Buffalo, La Guardia Fld, Syracuse, Cleveland, Oklahoma City, Memphis, Nashville, Dallas, Ft. Worth, San Antonio, Salt Lake, Norfolk, Seattle, Huntington, W. Va., New Orleans, Detroit, Minneapolis, Kansas City. Those letns underlined are known to present hazardous interference.

(2) USAF Pilots filing messages with CAA communications facilities: Pilots filing clearances or arrivals with CAA communications system for relay to Flight Service on CAA Schedule "B" should not file such clearances or arrivals with CAA towers. Messages should be filed with the radio rng stn or INSAC. Upon take-off, either IFR or VFR the actual time off the gnd should be immediately given to the nearest CAA radio rng stn for transmission to Flight Service.

✓ CORRECTIONS FOR PILOTS HANDBOOK: Effect. July 1, 1950, in accordance with AF Regulation 5-34, the USAF Pilot's Handbook, East and West US, replaced TO 08-15-3 for use by AF acft. Accordingly, no further changes to TO 08-15-3 will be published. Changes to Pilot's Handbooks, US., will be published, in the Airman's Guide immediately, when any change in instrument apch procedure is approved; Pilots Handbook should be corrected in accordance with changes published therein pending issuance of new charts. TO 08-15-10 is being revised to reflect this policy.

NAVY SPECIAL NOTICES

NAVY DATA: In accordance with Hydrographic Office Memorandum for Aviators, No. 17, September 17, 1948, before any changes or modifications of any aid to air navigation, such as realignment of radio ranges, modified instrument approach procedures, relocation of fan markers, etc., can be published by the Hydrographic Office, the Command requesting the change must first obtain approval from the Office of Chief of Naval Operations, Navy Department, Washington 25, D. C. When an approved change or modification has been made to any aid to air navigation, the Command shall immediately notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C.

All Naval Air Stations and Air Facilities are directed to notify the U. S. Navy Hydrographic Office, Division of Air Navigation, Washington 25, D. C., direct, of all contemplated or immediate changes in their field facilities, operation rules, air-ground communication facilities, GCA, etc., and other factors affecting safe operation of aircraft which do not necessitate approval from CNO. This may be done by letter, speedletter, or dispatch, as applicable.

In accordance with Chief of Naval Operations Aviation Circular Letter 19-49 of March 2, 1949, approval for the closing of any Navy or Marine Corps Air Station or Air Facility to transient military aircraft for a period in excess of ten days must be obtained from the Chief of Naval Operations.

Commanding Officers of Naval and Marine Coprs aviation activities are directed to review all information published by the Hydrographic Office, U. S. Air Force, Civil Aeronautics Administration, and Coast and Geodetic Survey on facilities under their command and immediately forward any corrections or approved amendments direct to the publishing agency. A copy of the corrections or amendments to information published by other agencies should be forwarded to the Hydrographic Office. The charts and publications issued by the above-mentioned agencies must be currently maintained in order that all aviators can be kept informed of changes to airfields, seaplane anchorages, navigational aids, and other factors affecting the safe operation of aircraft.

MANDATORY GUARD ON 3105 KC DISCONTINUED: Mandatory guard on 3105 kc at Naval and Marine Air-ground communications installations are being discontinued.

CIVIL SPECIAL NOTICES

FLIGHTS INTO CANADA: No photographic equipment may be installed in, nor may any photographs be taken from any U. S. aircraft operating in, or over, Canadian territory.

COMPASS LOCATOR SYMBOLS: To conform with ICAO standards the letter "L" is now in use as the abbreviation denoting a compass locator. This replaces the "CL" or "K" as used in the past on charts or in the Airman's Guide. "OMK" now becomes "LOM"; "MMK" now becomes "LMM"; "IMK" becomes "LIM".

The abbreviation "L" as used in the Airman's Guide indicated L/MF voice facility on other than range frequency. This now becomes "I".

CHECK THE DIRECTORY OF AIRPORTS

All abandoned airports; or those reported abandoned; or airportsclosed because of construction, lack of maintenance, or litigation; are cited as such in only the Directory of Airports. If there is an outstanding NOTAM on a field, a "+" in the remarks column of the Directory of Airports will so indicate. This NOTAM or additional data is cited in full in the Notices to Airmen section.

GCA AVAILABLE: How and Where

GROUND CONTROLLED APPROACH (GCA) AVAILABLE TO PILOTS AT CIVIL AND MILITARY AIRPORTS IN ACCORDANCE WITH THE FOLLOWING:

CAA GCA UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest GCA.

AIR FORCE GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective AFB.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call nearest air traffic control facility requesting GCA and further instructions.

Contact under VFR: VFR check-out training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When receiver or transmitter difficulties exist, Air Force towers may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make three hundred sixty (360) degree turns for identification. In either case, instructions will be followed at pilot's discretion.

No AF unit can transmit directly on tower low frequency. In addition to frequencies listed below, Air Force GCA emergency VHF transmissions are made on 121.5 mc. Simplex service on 3117.5 kc is available at all installations as an alternate emergency frequency to work scheduled air carrier aircraft.

NAVY GCA UNITS- Available to civil pilots in emergency or by prior arrangement with C.O. of respective NAS or MCAS.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility or associated station control tower.

Contact under VFR: VFR check-out training flights by prior arrangement with the C.O. of respective station.

Most Navy GCA units can transmit instructions on tower low frequency. In addition to frequencies listed below, Navy GCA emergency transmissions are made on 121.5 mc. Simplex service on 3117.5 kc is available at all installations as an alternate emergency frequency to work scheduled air carrier aircraft.

NOTE: Air Force and Navy GCA units require twenty (20) to thirty (30) minutes for warming up outside of scheduled hours of operation. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible. Civil minimums established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums.

AIR NAVIGATION RADIO AIDS

VHF OMNI-RANGES: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

NOTE: See OMNIRANGE USE, page 60.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSAC. (C) The station identification is monitored continuously by the communicator at the associated INSAC. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSAC. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored solely through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSAC, and located too distant from INSAC to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

LEGEND

(A) = Air Force facility. (N) = Navy facility. (P) = Private facility
(g) = Tower equipped with 121.9 or 121.7 mc transmitter for control of ground traffic. (7-19) = Hours of operation, i.e., 0700-1900
(U) = Unmonitored, but usable for navigation (3) = Monitoring category
(B) = Blue Hemisphere; (Y) = Yellow hemisphere
→ = New or revised data
✓ = New facilities or name changes, see page XIX
\+ = Additional data will be found in Notices to Airmen Section

NOTE: Letters between range crs are quadrant identifiers, e.g., "90 YN 180" indicates the quadrant between the two crs is a yellow N quadrant. The letter immediately following a range crs indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N", arual. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . .Approach Control Tower, CAA
B. . . . .Scheduled Broadcast Station (broadcasts weather at 15 & 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . .Control Tower, CAA
CA. . . .Control Tower, Air Force
CI . . . .Control Tower (City, County, Private, etc.)
CN. . . .Control Tower, Navy
D. . . . .Distantly controlled
FM. . . .VHF fan marker (100 watts)
GCA. . .Ground Controlled approach system
H. . . . .Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . .Non-directional radio beacon (Homing), power 2000 watts or more
ILS. . . .Instrument Landing System (voice on localizer channel)
IM. . . .VHF boundary marker
J. . . . .L/MF (200 - 415 kc) voice facility on other than range frequency
LFM. . .VHF fan marker, low powered (5 watts, not over 10 miles from range)
MH. . . .Non-directional radio beacon (homing) power less than 50 watts
ML. . . .Range (loop radiators), power less than 50 watts
MM. . . VHF middle marker
LMM. . Compass locator station when combined with middle marker of ILS
MOR. . Low frequency omni-directional range
MRA. . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . .VHF outer marker
LOM. . Compass locator when installed at outer marker site or within 5.5 miles of middle marker
P. . . . .Point-to-Point radio
RA. . . .Range (adcock, vertical radiators), power 150 watts or more
RL. . . .Range (loop radiators), power 150 watts or more
S. . . . .Simultaneous (range signals and voice) type of transmitter
T. . . . .Teletype
TX. . . .Principal teletype
V. . . . .Additional VHF voice feature on other than range frequency
VAR. . .Visual-aural VHF range
VOR. . .Omni VHF omni-directional range (omni-range)
W. . . . .Without voice facilities
Z. . . . .VHF station location marker at a range station

FREQUENCY LEGEND

V = 140.58 and 111.1 mc transmitted.
# = Guards same VHF frequencies station transmits except 111.1 mc.
(1) = 3105,4495 kc guarded
(2) = 3105,4495,3117.5 kc, 122.5 mc. This group of frequencies is group generally guarded by C.A.A. towers.
(3) = 3105,4495 kc; 122.1,126.7,140.58 mc. This group of frequencies is group generally guarded by INSACS.
e.g., (3)-140.58,122.1 = guards every frequency in group (3) except 140.58 and 122.1
(3),6210-140.58 = guards 6210 plus every frequency in group (3) except 140.58

NOTES

1. The new two-way international emergency frequency, 121.5 mc, has been commissioned at many towers and communication stations. All C.A.A. towers and communication stations will be using this frequency by approximately September 1, 1950.
2. All CAA Control towers stand continuous watch on 3117.5 kc, airline frequency. See page 59 for list of CAA INSACs which stand watch on 3117.5 kc.
3. Range courses are magnetic in-bearings.
4. All C.A.A. MH facilities operate continuously unless cited as follows: (on req)
5. All C.A.A. ranges operate continuously. Those which are not manned continuously are cited in the class column with hours of operation in parentheses, e.g., (6-24)
6. When a VHF is controlled by an associated LF range, because of space limitation, DTV is not included in the VHF range class.

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the channel or frequency on which the station reply is expected.

DIRECTORY OF AIRPORTS

LEGEND

CITY AND AIRPORT NAME

(AF) Airport name followed by city name in parenthesis (With AF in Type Column) - field owned or leased in whole by U.S. Air Force.

(AF) City and Airport Name (with C,I,M,MG or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such acitvity thereon.

NOTE: Similar combinations of above two citations of A,N,CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

* City, Site No., and Airway abbreviation - CAA intermediate field. Municipal airports with lights maintained by the CAA are listed similarly except there is no prefixed star.

NOTES:

1. MILITARY FIELDS ARE OPEN TO CIVIL AIRCRAFT ONLY BY PRIOR PERMISSION OF THE C.O. THEREOF. ALL AIRPORTS with C,I,M, or MG in type column are open to civil fliers.

2. USAF aircraft are permitted to use only those fields prefixed with an AF,A,N,NG,CG,P,PC or *.

3. When city and airport names are identical, the airport name is omitted to conserve space.

TYPE

AF	-U.S. Air Force	CG	-Coast Guard	MG	-Misc. Govt
A	-U.S. Army	I	-Intermediate	N	-Navy
C	-Commercial	M	-Municipal	NG	-Nat'l Guard
				P	-Private

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of city to airport. If orientation features are less than 1/2 mile from the field, distance is not specified

ELEVATION

Obviously, the effective length of a runway decreases with elevation above sea level. The C.A.A. formula for elevation correction is that a sea level runway length requirement must be increased 7% per 1000 feet of elevation above sea level. High temperatures also play an important role in reducing the effective length of runways.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

LONGEST RUNWAY

FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, and weather reports available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h - runway is paved (concrete, asphalt or similar type of paving)

aw - allway field

(26) - runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is not available.

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting
- L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
- 1 - Strip lights or portable runway lights (Electrical)
- 2 - Boundary
- 3 - Runway floods
- 4 - Low intensity runway
- 5 - Low intensity instrument approach (neon)
- 6 - High intensity runway
- 7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis guarantees only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.
Any S combination in parenthesis indicates only part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or C.A.A. communications station on field.

FUEL OCTANE

Civil Fuel:
- F1: 80 oct., at least
- F2: 87 oct., and lower
- F3: 91 oct., and lower
- F4: 100 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

FUEL OCTANE (cont)

Air Force and Navy Fuel:
- A+: 115/145 oct.
- A : 100/130 oct.
- B : 91/98 oct.
- C : 73/80 oct.
- J : JP - 1
- J3: J-3

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.

(b) "CLOSED" indicates closed to all traffic except in emergency.

(c) "OFL BUS ONLY" indicates closed to all transient military aircraft except on official business or in emergency. U.S. Aircraft require written orders. "AF OFL BUS ONLY" or "NAVY OFL BUS ONLY" indicates applicability of restriction only to Service indicated.

(d) "INACT - NO FACS" indicates AF airfields used exclusively by the USAF or municipal fields used jointly by the USAF and civil interest at which both USAF and civil interest are inactive; these will be available to military aircraft at the discretion of the Commanding Officer of the organization to which aircraft are assigned.

(e) "CIVIL FACS ONLY" indicates municipal fields under joint control or ownership of the USAF and/or Navy and civil interests at which no USAF or Navy facilities are available. Such fields may be used by military aircraft; however, only commercial service is available.

(f) "LIMITED USE" indicates some special restriction on use of field which will be listed in Notices to Airmen section of Airman's Guide.

(g) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.

(h) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.

(i) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

(j) "+" indicates additional data in Notices to Airman Section.

(k) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.

(l) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

(m) "A,B" indicates Air Force or Navy fuel. See Fuel Octane column.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP airport names are capitalized.
3. PRIVATE AIRPORTS: Offer no public service for profit and solicit no public patronage. Such fields are listed primarily because of their possible utility as emergency landing areas. Use of these fields is at the risk of the user. No "S" or "F" combination is ever assigned these fields.
4. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
5. NEW AIRPORTS: At the end of each state, under this heading will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

SPECIAL NOTICES

AIR FORCE SPECIAL NOTICES

AIR FORCE DATA: Advice covering Air Force fields or Air Force operations on civil fields, or Air Force radio facilities, and also Air National Guard fields and facilities should be forwarded to: Commander, Military Air Transport Service, Andrews Air Force Base, Flight Information, Director of Operations.

Requests for approval of the closing of Air Force airfields or restrictions in airfield facilities to transient military aircraft for over ten days should be forwarded through channels to Headquarters, U.S. Air Force. Restrictions in Air National Guard fields or facilities will be forwarded to the National Guard Bureau through the State Adjutant General for approval. Information to be published will be coordinated and submitted to the Civil Aeronautics Administration by Headquarters MATS.

In connection with the above, the attention of all base operations officers is invited to A.F. Regulation 55-12 of July 1, 1949, subject, "Notices to Airmen", to A.F. Regulation 5-16 of February 20, 1948, subject, "Responsibilities for Flight Publications ", and to A.F. Regulation 60-23 of September 23, 1947, subject, "Restrictions on Landing at Army Airfields"

AIR FORCE OFFICIAL BUSINESS: Air Force official business within the meaning of Air Force Regulation 85-2 is interpreted as the necessity for personnel aboard an aircraft to contact personnel, units, or organizations at or near the airfield selected for landing for the purpose of conducting transactions in the service of, and in the interest of, the United States Government. This does not include the use of an airfield by transient aircraft for the purpose of obtaining clearance, service, or other items attendant to itinerant operations. Cross country flights for the purpose of maintaining flying proficiency are not considered to be official business within the meaning of this regulation.
